

What's the application of WPC decking ?

In generally, WPC decking can be applied for almost every field of outdoor floor decoration, such as riverside plank, playground, walking street, living balcony, terrace, platform, swimming pool surrounding, etc. It can be said as a comprehensive building material.

EXCELLENT FEATURES

NATURAL - LIFE - SAVE WORRY

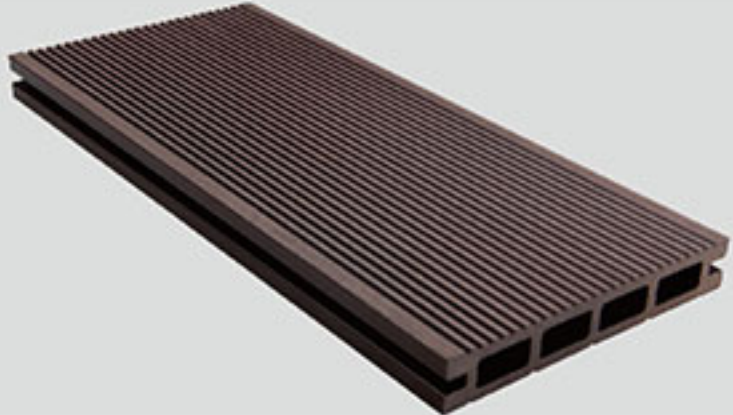

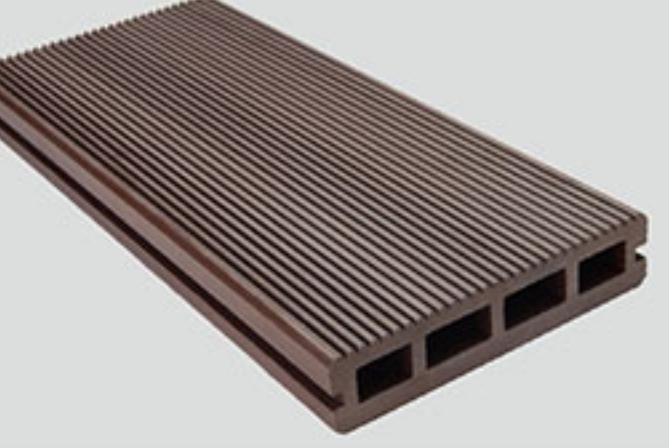

What's the features of WPC decking?

Deck is produced from Wood Plastic Composite (WPC) which is manufactured by an extrusion process using a mix of recycled plastic and hardwood with various bespoke additives.

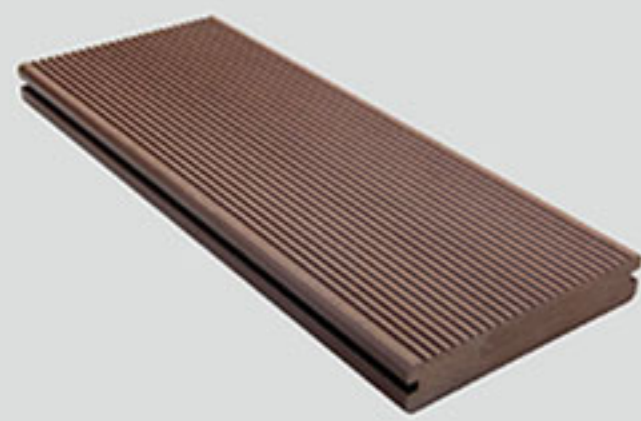

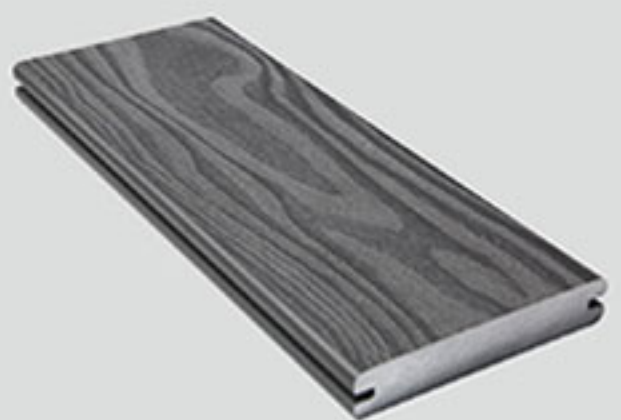

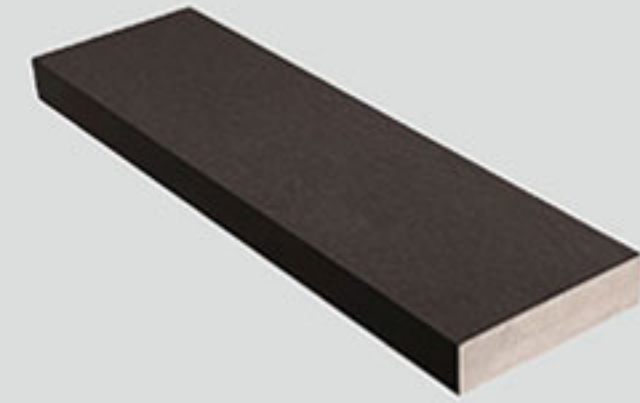

WPC is an immensely versatile material which combines the traditional appearance of timber with durability and resilience of an engineered composite.

- 100% recycled ,environmentally friendly
- Look and feel like real wood
- Anti-UV, anti-impact, anti-moisture and termites
- Service life time is 5-10 times longer than wood products
- Easy installation
- Offers a soft, splinter-free finish that's comfortable underfoot
- Waterproof, resistant to salt water corrosion
- Fade & stain resistant
- Will not warp rot or split
- Mold & mildew resistant
- High environmental adaptability, suitable for the wet places, ideal for marina.

L-Corner

Summary

- 1 Put two deck boards abreast;
- 2 Put long bar tie plate upright under the boards, put one bar every 25-35cm(According to the plank which be selected)
- 3 Then put one fixing stud, and between two board's channel;
- 4 Last put one screw in the fixing stud, and then screw down fast. Making fixing stud and tie plate connection fast.

Intallation(Plastic Clip)

Fix the joist

- Keep the space between joist and metope at least 10 mm for expansion joints.
- Ensure the ground is smooth and solid.

Install the L-Corner

At the junction of two places, the L-Corners were respectively cut along the 45° angle.

Fix the starting clips

Using the screws to fix the starting clips one the joist, and then install the first WPC decking.

Installation finished

Fix the plastic clips

Installing the WPC decking one by one.

Please note that:

The plastic clip must be perpendicular to the joist when installing.

WPC WALL CLADDING

OUT DOOR DECORATION

Wood-plastic Composite (WPC) hard decking material is manufactured from a combination of plastic (RESIN), natural fiber and some additives (eg.anti-uv, anti-ageing) and use special equipments to blend them. It mixes natural fiber and plastic perfectly to keep the natural impression of wood and with rich colors of plastic. It has gradually replaced wood and plastic, getting widely used in more and more fields.

WPC Wall Cladding

EXCELLENT FEATURES

NATURAL - LIFE - SAVE WORRY

Comparing timber with Wood composite product. after two years of time-tested about water(rain), climate(hot-cold), UV-arrounding(sunshine) and moth-eaten, you can see the real picture show. The WPC still keep their excellent performance. But the Timber have become crack, fade, moth-eaten,aging and rotten.

With scientific mixture of materials and advanced techniques, the WPC is a perfect composite combined by natural fabrics and plastic. Its properties are outstanding: high strength, high stiffness, anti-acid & alkali, erosion-proof, non-distortion, formaldehy deexcluded, easy to recycle, etc. And it can be made into various of sections and natural feature of timber , At the same time, the disadvantages of timber, like cracking, moth and weakness in durability, are all overcome by the use of WPC. Furthur more, the outstanding properties of WPC make it unnecessary to paint and maintain. In China, we take the lead in developing WPC for landscape architecture.

Keep the excellent character of plastic

Have the properties of wood

Produce fire-new WPC

Weatherproof

Easy to cut, fix and glue

Can be recycled with 100%

No crack, split, warp, or splinter

Easy to tenon, drill and nail

No sting or wood

High dimensional stability

Natural feeling

Requires less routine maintenance

Resistance to insects

Resistance to UV

Environmental friendly

Easy to manufacture manifold profiles

Innocuous

Multicolor, and needn't to paint

What's the advantages of WPC wall cladding?

Wpc cladding powerful force that it can adapt to the application in the commercial building sector, a waterproof, moisture, insects, termite characteristics and plasticity, can be very simple personalized style, fully embodies the personal style, especially its ultra fire performance (indoor saving up to 30%) it has a unique advantage.

Coowin wpc cladding to the best face to show in front of customers, regardless of appearance or packaging are sure to achieve excellence, each product is a work of art, through rigorous quality testing, environmental protection, pollution.

WPC WALL CLADDING INSTALLATION

Summary

Before we install the wall cladding, the joist must be installed first. Because we need to fix the wall cladding on the joist. (If the aluminum or steel frame as the joist is also okay) Of course, you can install the wall panel on the wall directly, but it needs to be allowed by the architect.

Then span of every two joists is normally 300 mm.

Installation & Instruction

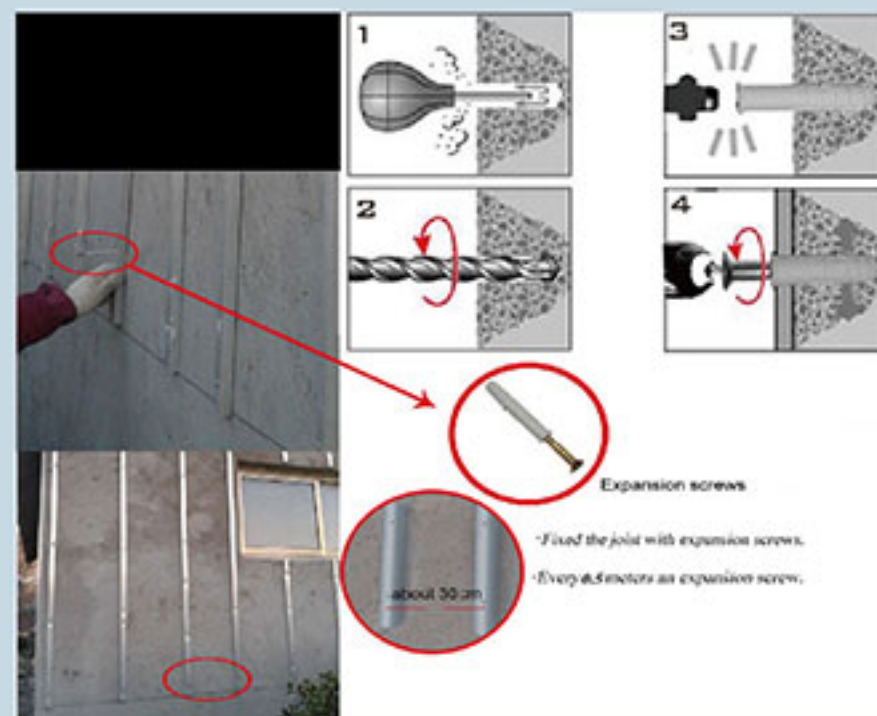

Tools & Accessories

Wall Cladding TF-04K(157x21mm) Installation.

Confirm the metope is flat.

Fix Joist with Expansion screw.
The space between two joists should be no more than 30cm.

Install the starting clip in the bottom of the joist.

According to the design of the wallpanel peg graft, it can be installed quickly from bottom to top.

Except the bottom layer of the wall panel needs the starting clips, the other parts wall panel requires only screws.

When encounter the windows installing, the installation method as shown on the right.

WPC WALL CLADDING INSTALLATION

Use L-corner to decorate the window's four frame .

Sometimes the outer wall cladding also need to install the L-corner.
As shown in FIG.
